

Don't open your *door* to the unknown

TeleDoorBell Modules

Phone line simulator TBG 2: Not everyone subscribes to a land line telephone provider and for those who don't we have the solution when installing a TeleDoorBell system. The TBG 2 module telephone line simulator module connects the TeleDoorBell system to the RJ45 phone jacks already installed in the premises. Now, by simply plugging in any corded or cordless phone you are connected to your TeleDoorBell system and all its functions.*

**Remote dial up and call forward not enabled.*

TBG2

Page/Mute capabilities M303HIFI: Link your TeleDoorBell to more than just your phones. The page/mute moduler links to your TeleDoorBell HIFI series controller to your Home Audio System via its page/mute input of your amplifier. Now inbound phone calls and TeleDoorBell door stations can mute your home audio system making sure you won't miss a call or visitor because of the music playing too loudly. What's more is you now have the ability to page throughout the home via your audio speakers already installed by using any corded or cordless phone in the house.

M403HIFI

Wireless interface/Ring Boost RVB7.5: The wireless telephone interface module RVB7.5 is designed for those rare installs that involve cordless phones utilizing sine wave transmission instead of the more popular square wave technology used to communicate between base station to the cordless handsets. By adding this module to your TeleDoorBell system you will ensure communication no matter what technology is employed. Where you need to ring a very large number of phones in one premises the RVB7.5 module will answer the call...so to speak.

RVB7.5A

DSL Filter

UL/ULC certified, the LX DSL 3F is the only one of its kind and filters out all noise associated with Hi Speed DSL Internet service. Unlike other DSL filters that filter out most of the noise, the LX DSL 3F filter stands alone and eliminates 100% of the DSL line noise.

Why is that important? Because as a security provider you want to be sure that the alarm system you install is never compromised by the DSL carrier. As a security provider in today's competitive market you also need to be cost effective. When you dial up an alarm panel to make changes, no matter what the alarm panel's make or model, you can connect everytime. What's more is that with our auxilliary port, the LX DSL 3F DSL filter allows you to quickly and easily connect a butt set to facilitate on site troubleshooting. You could use this port to remove all other DSL filters on the phone sets throughout the premises, nice touch.
